An Fg12-specific
                                                                                                                                                                                                                                                                        Modulating immune coagulation - by using Fg12 antibodies and compounds, used to treat conditions including graft rejection and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         antibody, an Fg12 antisense oligonuclectide, or a substance that affects prothrombinase activity of a Fg12 protein may be used to treat a condition requiring a reduction in proceagulant activity. A vaccine containing an Fg12 protein or peptide is used for prevention of graft rejection or foetal loss (claimed).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               is the amino acid sequence of mouse prothrombinase Fgl2, as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            DB 20; Length 432;

                   Human TIE-2 (tyrosine kinase with Ig and EGF homology domains)
ligand 2 (W01411) is a ligand that binds the TIE-2 receptor. Its
amino acid sequence was deduced from a cDNA clone (744321) derived
from human foetal lung cells. TIE-2 ligand 2 is a receptor
antagonist useful for blocking blood vessel growth, for tumour
therapy and for treating a proliferative disorder of a blood-
forming organ. It can be obtd. from natural sources or expressed
in transformed host cells.
                                                                                                                                                                                                                                                                                                                                                                195 vlamedkhiiqlqsikeekdqlqvlvskqnsiieelekkivtatvnnsvlqkqqhdlmet

R94605 is a human TIE-2 (hTIE-2) ligand 2 derived from a pBluescript KS clone. hTIE-2 ligand DNAs of the invention are recombinant versions of the native ligand coding sequences and may be used to produce the ligands at a high yield. Antibodies and receptor bodies that bind to TIE-2 ligands may be used to inhibit angiogenesis and neovascularisation temeselves are useful to promoche percept and the TIE-2 ligands. Tierat thromochembolytic dischaemia. TIE-2 ligands are also useful to promoche neovascularisation and wound healing e.g. for treatment of ischaemia. TIE-2 ligands are also useful to tireat thromochembolytic disease, atheroselerosis, inflammation and diabetes. Ligand bodies contq. TIE-2 ligands may also be useful for the delivery and targeting of growth factors, toxins etc. to sites
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         161

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             This is the amino acid sequence of the human TIE-2 ligand 2, used in the method of the invention, involving the production of TIE-2 ligands which promote healing. The nucleic acids, vectors and host calls used in the method of the invention are useful for the recombinant production of the ligands. The ligands, etc. are useful for blocking blood vessel growth, promoting neovascularisation, promoting the growth or differentiation of a cell expressing the TIE receptor, blocking the growth or differentiation of a cell expressing the TIE receptor and for attenuating or preventing tumour growth in

sequence. Ang-2 is a naturally occurring angiogenesis antagonist when vascular endothelial growth factor (VEGF) levels are low, and generally counteracts the blood vessel maturation and stability mediated by Ang-1. Ang-1 is a naturally occurring angiogenesis agonist, and is a maturation or stabilisation factor, converting immature vessels to mature vessels.
                                                                                                           243

Both Ang-1 and Ang-2 are useful in a therapeutic approach to the treatment of vascularised tumours. The invention relates to a binding ligand comprising a targetling agent that binds to an aminophospholipid, linked to a therapeutic agent (e.g. Ang-2). Aminophospholipids are stable and specific markers accessible on the luminal surface of tumour blood vessels. The binding ligand induces coagulation (thrombosis) in tumour vasculature or causes tumour necrosis (possibly by cell- or complement-mediated cytocoxicity and/or apoptosis). The binding ligands are used to treat vascularised tumours, malignant or benign, in animals,

This sequence represents the human angiopoietin-2 (Ang-2) amino acid sequence. Ang-2 is a naturally occurring angiogenesis antagonist when vascular endothelial growth factor (VBGF) levels are low, and generally counteracts the blood vessel maturation and stability mediated by Ang-1.
Ang-1 is a naturally occurring angiogenesis agonist, and is a maturation or stabilisation factor, converting immature vessels to mature vessels. Both Ang-1 and Ang-2 are useful in a therapeutic approach to the treatment of vascularised tumours. The invention relates to a composition comprising an anti-mainophospholipid antibody, or its antigen binding region. The composition is used to kill tumour vasculature endothelial cells. Aminophospholipids are stable and specific markers accessible on the luminal surface of tumour blood vessels. Ang-1 or Ang-2 may be used malignant or benign vascularised tumours in animals, especially large
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New composition for killing tumour vascular endothelial cells for treating solid tumours, comprises unconjugated anti-aminophospholipid

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   14;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This is the amino acid sequence of the chimeric TIE ligand INIC2F, used in the method of the invention, involving the production of TIE-2 ligands which promote healing. The nucleic acids, vectors and host cells used in the method of the invention are useful for the recombinant production of the ligands. The ligands, etc. are useful for blocking blood vessel growth, promoting neovascularisation, promoting the growth or differentiation of a cell expressing the TIE receptor, blocking the growth or differentiation of a cell expressing the TIE receptor and for attenuating or preventing tumour growth in

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This is the amino acid sequence of the chimeric TIE ligand IN2C2F, used in the method of the invention, involving the production of TIE-2 ligands which promote healing. The nucleic acids, vectors and host cells used in the method of the invention are useful for the recombinant production of the ligands. The ligands, etc. are useful for blocking blood vessel growth, promoting neovascularisation, promoting the growth or differentiation of a cell expressing the TIE receptor, blocking the growth or differentiation of a cell expressing the TIE receptor and for attenuating or preventing tumour growth in
                                                                                                                                                       410
                                                                                                                                                                                                                                                               397

```
This is the amino acid sequence of a variant human hepatocyte proliferation substance (HPS). The variant differs from the sequence encoded by T13396 at pos. 214: A to G change and pos. 314: T to C. These changes alter the amino acid residues at pos. 50 of the mature protein: lie to Val and pos. 83: Leu to Pro. The gene was isolated from a lambda-gt10 human cDNA library using the sequence T13396 as a probe. The human gene was cloned in plasmid pSCL to produce plasmid pSVLH which was subsequently recombined to produce plasmid pCDLH-dhfr in which the HSS gene is under control of the SR-alpha promoter. This plasmid is transformed into CHO cells to express the HPS protein. The HPS protein can be used to diagnose hepatitis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Human hepatocyte proliferation substance; rat; probe; SR-alpha promoter; chinese hamster ovary cell; CHO; hepatitis.

                                                                                                                                                                                                                                                           10;
                                                                 This is the amino acid sequence of a human hepatocyte proliferation substance (HPS). The gene encoding the HPS was isolated from a lambda-gtl0 human cDNA library using a fragment of the corresp. rat gene as a probe (sequence not given in the specification). The human gene was cloned in plasmid pSCL to produce plasmid pSVLH which was subsequently recombined to produce plasmid pSVLH which the HPS gene is under control of the SR-alpha promoter. This plasmid is transformed into CHO cells to express the HPS protein. The HPS protein can be used to diagnose
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human zapo3 protein; angiopoietin-1; angiopoietin-2; covalently linked; moiety; affinity tag; toxin; radionuclide; enzyme; fluorophore; multimer; coiled coil domain; carboxyl-terminal fibrinogen-like domain; angiogenic; haematopoietic; mitogenic activity; angiogenesis; inhibitor; endocrine-vascular cell association; revascularisation; DNA probe;

It is covalently linked to a molety chosen from affinity tags, toxins, radionuclides, enzymes and fluorophores. The protein is assembled as a multimer and is characterized by an amino-terminal colled coil domain and a carboxyl-terminal fibrinogen-like domain. Zapo3 has angiogenic, haematopoletic and mitogeneric activity. It is useful in the study and angiogenesis. It is possibly involved in modulation of endocrine-vascular cell association and may be used therapeutically to stimulate the revascularisation of tissue, to promote angiogenesis and prevent neuronal degeneration. DNA probes and anti-zapo3 antibodies can be used to detect
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present sequence is a human zapo3 protein. the TIE receptors are receptor tyrosine kinases which are expressed in vascular endothelial cells and early haemopoietic cells. The TIE receptors are believed to be actively involved in anglogenesis, and may play a role in haemopoiesis as well. The TIE ligand homologs can promote the survival and/or growth and/or differentiation of TIE receptor expressing cells. They can be used for promoting neovascularisation in wound healing and for promoting anglogenic processes, such as for inducing collateral vascularisation in an ischaemic heart or limb, or for promoting bone development and/or maturation and/or growth in a patient or muscle growth and development. The TIE ligand homologs and antibodies can inhibit the growth of endothelial cells and induce apoptosis of cells, particularly tumour cells. They can inhibit vascularisation of tumour cells. The antibodies can also inhibit vascularisation of a cell in which a gene encoding an NIJ, NIS, NIB or NIA polypeptide is amplified. The products can also be used for antibodies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             15;

cell
```

The present sequence represents a human angiopoietin (HANG) polypeptide. Nucleic acids encoding HANG were first identified in Incyte Clone 2365223 from an adrenal tissue cDNA library. The HANG polypeptide, and HANG antagonists are useful for treating or preventing a disorder associated with decreased or increased HANG expression or activity,

Claim 1; Fig 1A-F; 73pp; English.

angiopoietin

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

A; Contents: annotation; homentin cleavage site
A; Note: hementin, a protease from Haementeria ghilianii, the giant South American leech, C; Comment: The soft clot is converted into the hard clot by factor XIIIa (fibrin-stabili ger) and between alpha chains are synthesized in the liver.
C; Comment: The soft clot is converted into the hard clot by factor XIIIa (fibrin-stabili ger) and between alpha chains are synthesized in the liver.
C; Comment: The two forms of gamma chain, and B (see PIR:FGHUGB), arise by alternate spintron, which makes this chain different from the gamma-B chain at positions 434-437 and converted.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               A; Cross-references: GDB:119132; OMIM:134850

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      A;Note: hementin, a protease from Haementeria ghillanii, the giant South American lee C;Comment: The conversion of fibrinogen to fibrin is triggered by thrombin, which cle ization sites responsable for the formation of the soft clot.

Ccomment: The soft clot is converted into the hard clot by factor XIIIa (fibrin-stab ger) and between alpha chains (weaker) of different monomers.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ins are contained in the core. Two three-chain coiled coils emerge from this core and from the distal domain nodes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 A:Pathway: blood coagulation
C:Superfamily: fibrinogen beta chain; fibrinogen beta/gamma homology; fibrinogen disu

AGGREGATION.

SUBUNIT: HEXAMER CONTAINING 2 SETS OF 3 NONIDENTICAL CHAINS
SUBUNIT: HEXAMER CONTAINING 2 SETS OF 3 NONIDENTICAL CHAINS
(ALPHA, BETA, 6 GAMA), LINKED TO EACH OTHER BY DISULFIDE BONDS.

THE AMINO ENDS OF ALL CHAINS ARE CONTAINED IN THE CENTRAL NODULE.

CONNECT THE CENTRAL NODULE ARE 2 THREE-CHAIN COLLED COLLS, WHICH
CONNECT THE CENTRAL NODULE TO THE DISTAL NODULES CONTAINING THE
DISTAL DOMAINS. EXTENDING FAR PERIPHERALLY ARE THE LONG CARBOXYL
ALTERNATIVE PROBUCTS: 2 ISOFORMS; ALPHA-E AND ALPHA; ARE
PREDOMINANT FORM.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       SIMILARITY).
